

Lubricoolant Supply Systems

PRESSURE SUPPLY

Enhance your Productivity
Reduce your CO₂ Emissions

EFFICIENT PRESSURE SUPPLY

Our Pumps for your Machine Tools

At Grindaix we know all there is to know about the lubricoolant requirements of your machine tools. Based on this knowledge, we are able to design pressure supply technology with high levels of efficiency. This saves you unnecessary waste through over-dimensioning or avoids undersupply of your machine site and the associated thermal damage of your components.

We supply **all common lubricoolant pump technologies for low-pressure and high-pressure applications**, and we would be happy to provide these in combination with our Grindaix nozzles.

Are you wondering whether **frequency-controlled pumps** are worthwhile for your technical application? We would be pleased to answer this question.

Following an audit, we select suitable pumps for your applications and calculate the amortization period. We take into account the equipment of **central facilities** as well as **pressure boosting stations** in individual machines or machine groups.
